

Symeon Papazoglou

Android & Kotlin Multiplatform Developer

Greece | +30 698 050 3842 | sppzoglou@gmail.com | [LinkedIn](#)

PROFESSIONAL SUMMARY

Mobile software engineer with 6+ years of hands-on experience building and maintaining production applications, with a strong focus on Android development in Kotlin. Currently working primarily with MVI, Jetpack Compose and Clean Architecture, with strong experience in coroutines/Flow, Ktor/Ktorfit, Retrofit2, Room (SQLite), Supabase, Firebase and dependency injection with Koin/Hilt. Also experienced with native iOS and Kotlin Multiplatform / Compose Multiplatform, including the ongoing migration of production mobile functionality toward shared KMP code. Comfortable owning features end-to-end, debugging complex application flows and evolving mobile architectures for maintainability.

CORE TECHNICAL SKILLS

Mobile	Android SDK, Kotlin, Java, Jetpack Compose, Kotlin Multiplatform, Compose Multiplatform, Swift, SwiftUI
Architecture	MVI, Clean Architecture, unidirectional data flow, modular architecture, ViewModel, Coroutines, Flow, StateFlow, SharedFlow
Networking & Data	Ktor, Ktorfit, Retrofit2, REST APIs, JSON, JWT, kotlinx.serialization, Room (SQLite), DataStore, Supabase, Firebase
Dependency Injection	Koin, Dagger Hilt
Maps & Device	Google Maps, marker clustering, BLE discovery, local-network communication, permissions, file/media handling, WM-Bus telegrams
Tooling	Android Studio, Xcode, Gradle, KSP, Git, debugging, unit testing

PROFESSIONAL EXPERIENCE

Android Developer | Ianic SA

Apr 2021 - Present | Athens, Greece

- Develop and maintain production Android applications in Kotlin, covering feature implementation, application architecture, API integration, local persistence, authentication, permissions and device-level capabilities.
- Build modern Android features primarily with MVI, Jetpack Compose, ViewModel-driven state, Coroutines and Flow/StateFlow, using unidirectional data flow and reusable UI components.
- Apply Clean Architecture and modular patterns with Ktor/Ktorfit and Retrofit2 networking, Room (SQLite), DataStore, Supabase, Firebase and dependency injection with Koin/Hilt.
- Contribute to the ongoing transition of Smartville toward Kotlin Multiplatform, moving suitable shared business logic and data/networking layers into common code while preserving platform-specific Android/iOS integrations.
- Work with Google Maps and marker clustering, WM-Bus telegram processing, BLE/local-network flows, file/media handling and permission-heavy device integrations across Ianic products including Smartville, Balloon and Array.
- Investigate and resolve complex asynchronous workflows, data synchronization and production issues across evolving mobile codebases.

iOS Developer | Ianic SA

Dec 2021 - Aug 2022 | Thessaloniki, Greece

- Contributed to native iOS development and cross-platform product delivery, working with Swift/SwiftUI, Xcode and REST-backed application flows.
- Helped maintain feature parity and consistent behavior between Android and iOS implementations, including Smartville on iOS.

Frontend Web Developer | Be Culture

Feb 2021 - Oct 2021 | London, United Kingdom

- Worked on web front-end functionality for digital products, including ShipWatch, using JavaScript, HTML and CSS as part of the project stack.
- Collaborated remotely with a UK-based team on interactive front-end functionality and web integrations.

Android Developer Intern | Arx.net

Jul 2020 - Jan 2021 | Thessaloniki, Greece

- Built Android front-end functionality in Android Studio using Git, MVVM, LiveData, View Binding, Navigation, Retrofit, JSON, Dagger Hilt, Material components and RESTful APIs.
- Contributed to the AlmaPet Android application and gained production-oriented experience in API-driven mobile development.

SELECTED PERSONAL PROJECTS

Nexo - Cross-Platform Local File Transfer | Personal Project

2026

- Designed a Kotlin Multiplatform application for local Android-iOS file transfer without requiring cloud storage or an internet connection.
- Implemented nearby-device discovery with Bluetooth Low Energy and designed local Wi-Fi role negotiation for Android-Android, Android-iOS and iOS-iOS scenarios.
- Defined shared device/discovery models and platform-specific implementations while handling permissions, advertising, scanning, connectivity and interoperability constraints.

Orbit AI - Local AI Assistant | Personal Project

2026

- Built a Kotlin Multiplatform / Compose Multiplatform AI assistant that communicates with local Ollama models through Ktor-based networking.
- Implemented streaming chat responses, typed domain/DTO layers, Result-style error handling and tool-call workflows such as alarms, calendar events, reminders and app actions.
- Structured the application across presentation, domain, data and utility modules using Koin, DataStore and reusable Compose Multiplatform components.

EDUCATION

BSc / Degree in Applied Informatics | University of Macedonia

Sep 2016 - Sep 2022 | Thessaloniki, Greece

Focus: Applied Informatics and software development.

Technical Applications of Informatics | ALFA Institute of Vocational Training

2017 - 2019 | Thessaloniki, Greece

LANGUAGES

Greek - Native

English - B2

ADDITIONAL INFORMATION

Military obligations: Fulfilled (Special Forces, 2019-2020).

Driving licence: Category B.
